We recommend sealing of all natural stone products.

Mushroom Granite

Description

A clever chameleon with light multi-coloured layers of beauty which can play it warm or cool. Neutral in the sun but so stunning it may steal the limelight!

Why choose Mushroom Granite?

Mushroom Granite provides a modern, light look. It's a very dense stone and will stand the test of time. There is minimal colour variation compared to many other natural stone tiles. Granite is a non-slip tile safe for pool surrounds and is cool underfoot. There is minimal variation from tile to tile but Mushroom can have some Almond Granite mixed in. The tiles contain a small amount of mica which sparkles in the sunlight.

Finish

Bush Hammered

Maintenance

Minimal. Seal with penetrating sealer to make cleaning easier. The surface can get brown marks on it early in its life. This is easily removed and will not continue past the short term.

Slip Rating (Wet Pendulum)

This tile has a P5 slip rating in the (V) pendulum classification which is the highest wet pendulum rating available under the current standards. (For pool surrounds, a minimum of P4 is required.)
