

Ash Marblano Grippa (Smooth, Non-Slip)

Tile Sizes

600x600x10mm \$45.00/m²

Description

Light silvery-grey in colour, reminiscent of smokey silk curtains swirling in a light breeze. Ash Marblano® Grippa (Smooth, Non-Slip) is the ideal choice for a sophisticated and smart alfresco area, providing the perfect transition between indoor and outdoor spaces. Use our 10mm Grippa tile in the sunroom and patio, then our 20mm tiles for your pool area and coping.

Why choose Ash Marblano® Grippa

Ash Marblano® Grippa porcelain tiles are hard, dense and durable, making them very resistant to staining. What's more, the colour variation in the tiles hides marks in between cleans.

Important Information

Ash Marblano® 10mm Grippa does not match Ash Marblano® 20mm coping and tiles exactly but blends well enough to work. We recommend using the Ash Marblano® 10mm Grippa on the alfresco areas and then using the regular 20mm tiles for surrounds and coping as they have a higher slip rating.

Finish & Slip Rating (Wet Pendulum)

Grippa - Smooth, non-slip (Dry Surface P2; Wet Surface P4). A tile with a rating between P0-P3 is generally considered suitable for indoor flooring while a P4 or P5 has a lower slip risk and can be used outside or around a pool. This tile has a P2 slip rating when dry and a P4 slip rating when wet in the (V) pendulum classification. (For pool surrounds, a minimum of P4 is required.)

Maintenance

Minimal maintenance is required. These tiles do not require sealing. Porcelain's dense surface absorbs very little moisture, so spills that might seep into another material and cause a stain, can be wiped up with a damp cloth or hosed off. Generally only needs to be swept and cleaned with water and a mild detergent regularly.

Porcelain tiles do not need sealing due to having little to no porosity. Some people choose to seal their porcelain for easier cleaning. Sealing will especially assist with the cleaning of the grout. Please ensure you use an appropriate 'porcelain specific' penetrating sealer. We recommend contacting John from Stone Clean and Seal for advice.
